9. RGBCMY independent color adjustment
10. Split screen for side by side image display
11. Optional 3.5" LCD Monitor to monitor your objects
12. Built-in Ethernet port for remote control

Key Features

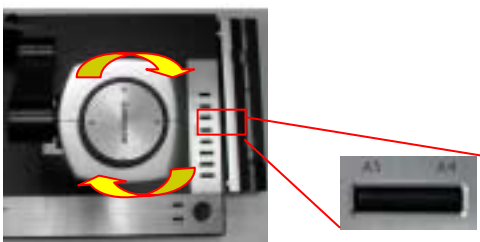

20 FPS live Progressive display

PS600 is equipped with high speed ASIC and displays the image with 20 frames per Second. By this high performance function, you can enjoy a real time live image display without time delay.

Up to 32 images storage

Documents could be captured and stored up to 32 images into a built-in memory via a user friendly hot key on the keypad or just push one button on remote control. All of those captured pictures can be playback later easily by just pressing two buttons on the remote control.

Easy to use by User Friendly Design

Mechanical camera head rotation -90 ~ +90 degree

Directly rotate the image of document by turning the mechanical camera

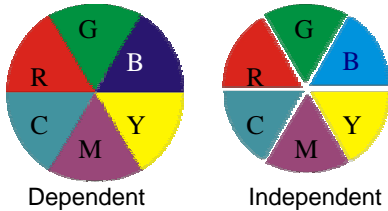

Hot keys for step zoom

Step zoom to fit A4 height and width paper via Hot keys

Seamless switch between switching signal sources

You can use PS600 as a switcher that could switch the output source from presenter or computer without time waiting and uncomfortable blue waiting image.

RGBCMY independent color adjustment

By offering efficient RGBCMY independent color adjustment software, you can get the color tone as you want easily. This function gives you power to adjust individual color element without changing other colors.

Live image Captured image

Split screen for Side by side image display

The PS600 can display current live image and the image from Build-in memory at the same time and comparing to each others. You can also Pan and scroll the image that you desire.

Built-in CF Card Slot for portable storage

Beside the build-in memory, PS600 offers a CF memory card slot for your un-limited expansion.

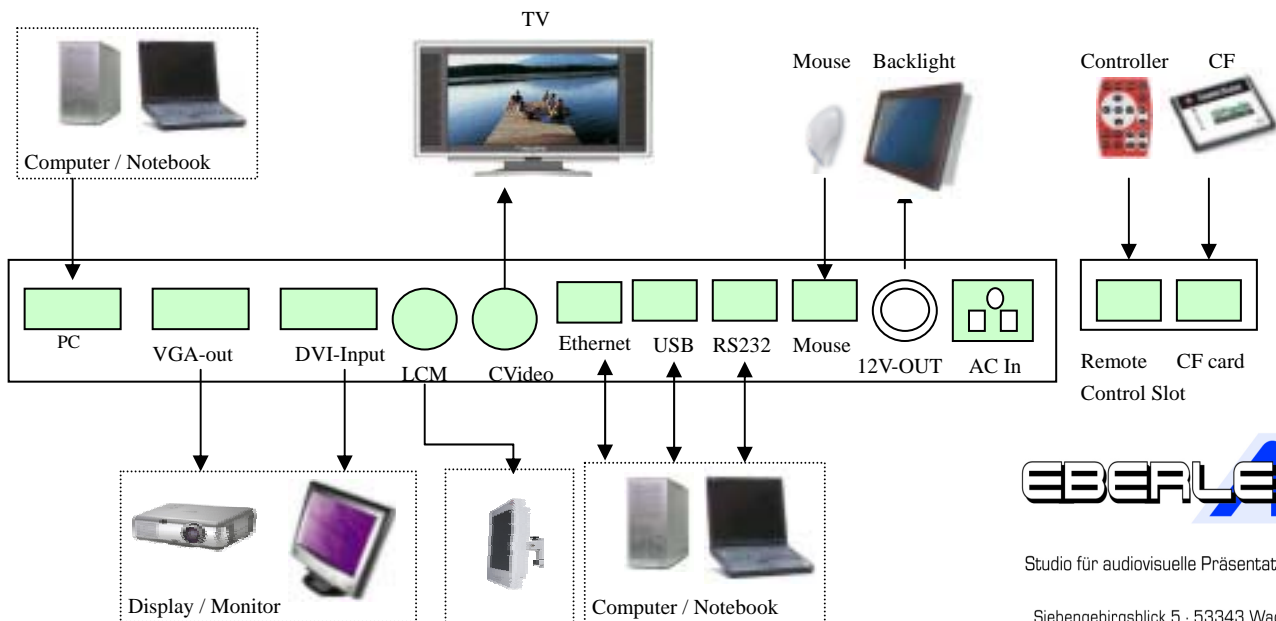

Built-in Ethernet port for remote control

The PS600 is equipped with an Ethernet LAN port , You can remote control PS600 through Ethernet connection.
